                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession mumbers given in the feature table with their source databases:

Em: _RMBL; Sw: _SWISSPROT; Tr. _TRBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Sequence 8, Application US/09175684A

Patent No. 6593463

GENERAL INFORMATION:

APPLICANT: Chen, Li How

APPLICANT: Meade, Harry M.

TITLE OF INVENTION: NOVEL MODIFIED MSP-1 NUCLEIC ACID

TITLE OF INVENTION: SEQUENCES AND METHODS FOR INCREASING MRNA LEVELS AND PROT

TITLE OF INVENTION: EXPRESSION IN CELL SYSTEMS

FILE REFERENCE: 10275-133001

CURRENT APPLICATION NUMBER: US/09/175,684A

CURRENT ETLING DATE: 1998-10-20

PRIOR APPLICATION NUMBER: US 60/085,649

PRIOR APPLICATION NUMBER: US 60/062,592

PRIOR APPLICATION NUMBER: US 60/062,592

PRIOR FILING DATE: 1997-10-20

NUMBER: OF SEQ ID NOS: 19
                                                                                                                                                                                                                                                               RESULT 11
                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                     밁
